## Price Changes for 2011

### Price Increases effective 1st May 2011

The worldwide demand for HFC refrigerants has continued to grow in 2011 coupled with major cost increases on raw materials, particularly for R134a and 125, the key components of HFC blends.

Manufacturers have advised that there will be significant price increases over the next 6 months. We will endeavour to minimise the impact of the changes but have no alternative but to pass on the increases detailed below effective 1st May 2011.

There are likely to be further price increases which will be notified separately. We are working very closely with our suppliers to maintain product availability during this period.
